FOR RELEASE August 30, 2006

Quatech Introduces Next Generation USB Serial Adapter with High Speed USB 2.0

Hudson, OH, August 30, 2006 – [Quatech Inc.](#), a wholly-owned subsidiary of DPAC Technologies Corp. (OTCBB: [DPAC](#)) and a leader in 802.11 wireless machine-to-machine (M2M) connectivity solutions, today announced the upgrade of their industry-leading USB Serial Adapters with high speed USB 2.0.

Boasting speeds of up to 921 kbps, the new Quatech USB Serial Adapters enumerate themselves as standard serial ports without changes to application software or hardware. The adapters connect a single USB port to one, two, four or eight devices with RS-232, RS-422 or RS-485 serial ports. Each adapter is RS-232 only or MEI (multi-electronic interface) software-selectable between RS-232/422/485.

“Quatech is proud to roll out these new high speed products for our customers,” said Steve Runkel, CEO of Quatech. “As a leader in the M2M space, we are committed to continually enhancing the features of all of our device networking and connectivity products to meet the evolving standards of the latest computer systems.”

The Quatech USB Serial Adapters deliver plug-and-play capability with optional surge suppression. Contributing to the increased speeds are high speed UARTs with 1024 FIFOs to boost data rates. Quatech USB Serial Adapters offer full modem control and hardware/software flow control and are bus powered (no external power supply needed). Embedded, board-only units are available with one, four or eight independent ports. All Quatech USB Serial Adapters (USB 2.0 versions) are now RoHS-compliant, adhering to the recent European Union policy banning lead and other hazardous substances.
